A Common Definition

A common definition is one that is developed on a collaborative and inclusive basis that can be applied to a wide range of settings and contexts. This definition is intended to be versatile and adaptable to different environments.

Adoption Landscape

Our research findings show that the adoption of technological competencies in Asia is still in its初级 stages. Several barriers and challenges have been identified, including high costs, lack of awareness, and insufficient knowledge.

Key Findings

1. The majority of SMPs in the ASEAN region possess only basic level of technological competency skills.
2. SMPs utilise various free IT tools and platforms to cater for current and future demands.
3. Many SMPs view technology development and integration system services or IT advisory services to their clients.
4. SMPs have low levels of innovation and demand for technology development.
5. SMPs utilise technology and do not provide advanced IT services (including high-end advanced technology and do not provide advanced IT services).
6. SMPs have low levels of innovation and demand for technology development.
7. SMPs utilise technology and do not provide advanced IT services (including high-end advanced technology and do not provide advanced IT services).
